Summary

Aspiring Software Engineer with experience in Java, SQL, and core computer science concepts including Data Structures and Algorithms, Object-Oriented Programming, DBMS, and Operating Systems. Actively developing problem-solving abilities through DSA practice and hands-on projects. Familiar with React and Node.js and interested in backend development, cloud technologies, and scalable software systems. Focused on writing clean, efficient, and maintainable code while continuously learning industry-relevant technologies and contributing to real-world engineering solutions.

Education

New Horizon College of Engineering
Information Science and Engineering

B.E • 8.54 CGPA(6th sem)
Bengaluru, India • 2023-2027

Sri Vijay Vidyalaya Higher Secondary School
Computer Science

12th • 84%
Hosur,Tamil Nadu,India • 2022-2023

Projects

Betterhood – Crowdsourced Civic Issue

3 months

- Developed a crowdsourced civic issue reporting platform enabling users to submit complaints with image evidence and automatic GPS location tagging.
- Built a backend using Node.js and Express.js to manage complaint storage, categorization, routing, and status tracking for municipal authorities.
- Integrated Google Maps API and Firebase Cloud Messaging to visualize reported issues, provide location-based insights, and deliver real-time notifications.

Fitness and Wellbeing

3 months

- Developed an AI-assisted fitness and wellbeing application providing personalized workout plans, diet recommendations, and BMI-based health insights.
- Integrated Google Fit API to monitor real-time health metrics, including step count, calories burned, and daily physical activity.
- Implemented an AI chatbot using Dialogflow/OpenAI APIs with Firebase Authentication and Cloud Firestore for secure user management and personalized fitness guidance.

VeriFrame – AI-Powered Deepfake Detection & Content Verification Platform

3 months

- Developed a full-stack AI-powered platform to detect deepfake images using TensorFlow MobileNetV2 with image preprocessing and real-time prediction.
- Built an end-to-end image upload and AI inference pipeline using React.js, Node.js, Express.js, Flask, and REST APIs to classify uploaded images as Real or Fake with confidence scores.
- Designed a responsive dashboard for image analysis and result visualization while architecting the platform to support future fake news verification and digital content authenticity analysis.

Skills

</> Programming:

Java, SQL

<> Backend:

Node.js (Basics),
Spring Boot

📁 Core CS:

DSA, OOP, DBMS,
Operating Systems

📦 Frontend:

React

🧰 Tools

Git, GitHub

Certifications

NPTEL - Cloud Computing

NPTEL – Data Analytics

SAP - Generative AI Developer

Simplilearn – Getting Started with
Full Stack Java Development

Simplilearn – Git Training

Languages

English, Tamil, Kannada

Interests

Problem Solving

Playing Cricket

Listening to Music
